

IR, OR MADAM,

In presenting our **New Rose List** for 1903 and 1904, we once more tender our hearty and sincere thanks to our Patrons for favours extending over a quarter of a century. To those who have sent us their annual orders, and to those who continue to recommend our roses to their friends, we especially wish to convey our sense of gratitude.

Our Successes at the Rose Shows all over the United Kingdom have not only been continued, but have increased year by year.

We would remind our Customers, that at the National Rose Society's Show in the Temple Gardens Coronation year we won the Champion Cup for 72 distinct varieties of Exhibition Roses, and also the First Prize for 36 bunches of Garden or Decorative Roses, a feat which had never before been accomplished by any firm, and is not likely to be repeated in the near future. We mention this to show we are quite up to date, and as invincible in the section set apart for Garden or Decorative Roses—which form one of the most attractive features of any Rose Exhibition—as we are in the classes set apart for Exhibition Blooms, proving beyond doubt that we know how to grow all sections and varieties of the Queen of flowers, and that our plants are as good as can be grown.

Our stock of plants is the largest we have ever held, and we think the best, in spite of unfavourable weather during April, May and June, and we attribute the fine growth due to the gritty soil in which the plants are grown, in which plenty of fibrous roots are formed.

From an experience extending over twenty-five years, we are able to give the best advice as to the formation of Rose Gardens, and for a small charge we can at any time send an experienced man to any part of the country for the purpose of advice and instruction.

Our Export Trade to America, Russia, India, Japan, Ceylon, New Zealand, and all over the world steadily increases, and reports from Customers in these distant parts are most satisfactory. The last week in October or early in November and again in March is the safest time to ship Roses for foreign countries, and we take all risk of delivery.

We treat our customers liberally, and when the choice of sorts is left to us, we are careful to select free growers and continuous bloomers, which are charged at a low rate. Those who are not acquainted with the manners and customs of each rose will obtain far better results by leaving the selection of sorts to us, simply stating the quantity required, position, and soil in which they are to be planted.

### FRANK CANT & CO.

FREE CARRIAGE.—All orders to the value of \$5 and upwards will be delivered Carriage Paid to any Railway Station in the United Kingdom. Orders to the value of \$3 to any Railway Station in England, and orders to the value of \$1 to any Station on the Great Eastern Railway (except the northern extension of this line). We do not, however, pay carriage on Pot Roses, but add extra plants to compensate for the Railway charges on them. Packing is charged at cost price, and two-thirds of the charge is remitted or allowed when empties are returned,

### IMPORTANT.

Extract from the DAILY MAIL, Friday, May 8th, 1903.

### THE COST OF CARELESSNESS.

The statement of Mr. Austen Chamberlain that in a year 25,000,000 letters and other packets are not delivered by the Post Office because of incorrect or insufficient addresses is an indictment of national carelessness.

This total means that one of every 156 letters, postcards, newspapers, circulars, and parcels entrusted to the Post Office does not reach its destination.

Careless correspondents who cost the country about £54,000 a year, are yearly growing in numbers. The undelivered letters are now three and a half millions more than they were five years ago, and undelivered letters, postcards, newspapers, and parcels are increasing at the rate of 637,000 annually.

TO INSURE CORRECT DELIVERY PLEASE ADDRESS . ALL CORRESPONDENCE TO

### FRANK CANT & CO.,

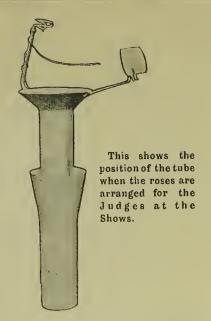

Braiswick Rose Gardens, COLCHESTER.

### The FRANK CANT

PATENT TELESCOPIC ROSE EXHIBITION TUBE.

This shows the position of the tube when the Rose Box is closed for the journey to the Show.

This is the best Exhibition Tube ever invented. The outer tube is made tapering, therefore it will fit any ordinary tube hole, and being smaller at the lower end it fits tight, and remains erect during the journey to the shows—this is an immense advantage. The inner tube holds the water, the flower, and the label, and being telescopic may be lifted three inches or less, and is kept in position at any desired height by springs which cannot get out of order.

The upright wire forms the only support the bloom requires to keep it quite apright and steady, and being a fixture it cannot be lost.

Price 9/- Per Dozen; One Sample Tube, Post Free, 1/-

### THE ACME BLOOM PROTECTOR.

1'- Each; 9'- Per Dozen. Extra Sticks 16 Per Dozen.

The prices given include a square stick  $\frac{1}{2}$  inch by  $\frac{1}{3}$  inch by 4 feet, and are complete and ready for immediate use.

The Patent Imperishable Zinc Fose Label, with raised letters, as shown above, can be supplied to Customers ordering Roses, at 19, 3d. per dozen.

Aluminum Wire to fix the Hanging Labels
12 per roll, post free.

The Patent Acme Stem Label Is recommended for Bush Roses, and ean be supplied to Customers ordering Roses, at 3s. per dozen.

### EXHIBITION ROSE BOXES

We supply Exhibition Rose Boxes for six, nine, twelve, eighteen, or twenty-four blooms; the regulation size adopted by the National Rose Society. Fitted with or without tubes.

These are very Light in Woight and very Strong.

Prices on Application.

The following is a list of the 72 Varieties with which we wen

The above Collection of 75 varieties are known as The Gold Medal Collection of Autumn Blooming Roses, and can be supplied in fine well-grown bush plants, one of each kind, for the sum of  $\pounds 5$ .

PACKAGE FREE AND CARRIAGE PAID.

### MINTS ON GROWING ROSES.

ARRIVAL OF PACKAGE.—Take it to some sheltered place and carefully unpack. Take the plants from the bed of straw, and the roots and tops thoroughly sprinkle with water. Should the weather be wet, and the soil unfit to receive them, it is best to open a trench, lay the roots of the plants in thickly, and cover them well with earth until the weather is fine, and the soil sufficiently dry to tread upon. Standard or Dwarf Teas may be left in this position until March, before planting them in their permanent quarters. If the operations of the plants in t tion of planting is being performed during a drying wind or a sunny day, it will be advantageous to the plants before removing them from the shed in which they were unpacked to dip their roots into a pail of thick puddle composed of loam (or any adhesive soil) and water, two or three times. By this operation the small fibrous roots will be covered with a coating sufficient to protect them from the most searching winds. Assuming that the ground has been previously put in order to receive them, follow then the instructions for

DELAY IN TRANSMISSION.—Seldom does it occur that packages are delayed in transit for any length of time, but occasionally it does happen that a package becomes overdue, and when delayed for more than a week it is necessary to carefully examine the plants on arrival, to ascertain if they have suffered. If any appear shrivelled bury them completely in a trench six inches deep, and allow them to remain three days underground, then take them up and plant them in their permanent quarters. Our system of packing is so perfect, under ordinary circumstances plants will take no harm if delayed on the journey ten days or even a fortnight.

SITUATION.—The most perfect situation for roses, and particularly exhibition roses, is a bed to themselves, sheltered, if possible, from the south west and north east, and shaded from bright sunshine after 3 o'clock in the afternoon; a little shade is most beneficial, but there is no garden in which some roses may not now be grown successfully.

SOIL.—That which they especially delight in is a rich unctuous loan that feels greasy when pressed between the fingers; where this is not to be had, the soil should be improved: if light, by the addition of loam (not clay) well worked in; where heavy, good drainage and the addition of coal ashes in small quantities will help it, but

in such soils drainage is most important.

PLANTING.—This should be done in the latter part of October or November, but may safely be continued. until March. If a bed of roses is required, it is necessary that the soil be dug 18 inches deep, mixing in plenty of manure with it. If planted with standards they should be planted about two-and a half feet apart, and require to be securely staked to prevent the winds from moving them. If planted with dwarfs, one-and-a half to two feet apart is the correct distance for most sorts, and if they are required to furnish a quantity of bloom for house or garden decoration, pruning must be sparingly done, cut back the weaker shoots to within about 3 or 4 inches of the base, and the longer and stronger shoots may be reduced by one third of their length and bent over in the shape of a bow, and kept in that position by means of a crotch stick inserted tightly in the ground. Plants treated in this manner form lovely objects producing masses of bloom all through the summer. Of course, this applies to the strong-growing varieties. Great care should be taken not to plant too deeply. The roots of standards should be about five inches below the surface. The roots of dwarf roses should be planted so that the union of the bud with the stock is one inch below the surface. Care should be exercised to spread the roots over as large an area as possible, and not allow them to cross cach other. Do not put manure on the bare roots, but shake some fine mould over them, fill in, TREAD FIRMLY, and lay some long litter on the surface round the plant as a protection from frost.

MANURING.—Roses are gross feeders, and require a quantity of manure. That from a bullock yard is the best, but when this is not procurable, either pig or stable manure is a good substitute. It is best to apply a surface dressing in the antumn for protection against frost. Liquid manures should not be applied to newly-

planted roses

PRUNING should be done during March. Pruning with the object of growing exhibition roses, and pruning for the purpose of growing roses for garden and house decoration are two distinct operations. For growing exhibition blooms the plants must as a rule be cut hard back, leaving at most six "eyes" on each shoot. The weaker and shorter growing varieties must be pruned sparingly if the plants are expected to attain to any size. In all cases it is necessary to cut away dead, weak, and unripe wood, leaving only the strong and well matured, which should always be shortened. To produce well-formed plants, care should be taken to leave the top eye pointing outwards, giving the plant room to expand. Plants grown for garden and house decoration require to be sparingly primed, merely the centre of the plants thinned out and the shoots reduced by short leaffed their about 1 and 1 an

WATERING,-Should the spring and summer prove very dry, syringing overhead and watering is most necessary, and all fresh-planted roses will require to be well satured once a week, and syringed overhead daily with water which has been exposed to the action of the air. If larger flowers are required water established

plants with diluted liquid manure. Plants on walls must be watered twice weekly.

MILDEW is sometimes very troublesome in rapid variations from heat to cold. Powdered sulphur should be dusted on the foliage affected in early morning or late evening, when the foliage is wet with dew.

INSECTS are troublesome to the rose grower, and great care and precaution is necessary to prevent their ravages. In spring, as soon as the plants begin to grow, should the young leaves curl and stick together, these must be unfolded, where will be found a small maggot which feeds on the young leaves, and would, if not destroyed, eventually cat the bud and spoil the flower. After this the green fly will appear, and for the destruction of this pest we sell a concentrated mixture which is certain death to aphis and does not injure the foliage. Price 5/- per ½ gallon (which will make 20 to 24 gallons). (½ Pint to 5 gallons).

STOCKS FOR ROSES.—For Standards and Half-Standards we use the Dog Briar; for Dwarf II.P.'s the Briar Cutting, Scedling Briar, and the Manetti Stocks; for Dwarf Teas and Noisettes the Briar Cutting and Seedling Briar Stocks; when the selection is left to us, we send Roses Budded on the Stock on which we have found from long experience and careful observation they best succeed.

### PRICES OF ROSES

WHEN THE SELECTION OF SORTS IS LEFT TO FRANK CANT & CO.

Standard Roses are from 3ft. to 4\ft. high. Half-Standards are from 1\ft. to 2ft. 9in. high.

STANDARD WEEPING ROSES, of a few sorts, 5ft. to 8ft.	<b>5</b> /- to <b>7</b> / <b>6</b>	each.
STANDARD AND HALF - STANDARDS, a good assortment, and very fine plants	Per doz. Per 100	
STANDARD AND HALF-STANDARD, TEAS, AND NOISETTES, very fine heads and the best sorts	21/- £8	£75
DWARF STANDARDS on stems about 1ft. to 15in. high, best sorts, and free bloomers	12/- £4/1	0 £40
DWARF (or bush) H.P.'s, fine plants on briar- cutting or seedling briar	9/ <b>-</b> £3	£25
DWARF (or bush) H.P.'s, best sorts and extra fine plants on Manetti	8/- <b>£</b> 2/1	0 £20
DWARF (or bush) TEA AND NOISETTE, on briar only, all the very best sorts	12/- £4	£35

We do not recommend Roses on their own roots; only a few sorts grow freely and make good plants when grown in this way.

Purchasers of 100 or more Rose Trees who make their own selection, and order not less than three plants of a sort, will be allowed 10 per cent. Discount off individual Catalogue Prices for Cash. When Cash accompanies order no charge is made for packing and extra plants are added gratis.

PARCEL POST.—Small quantities of Dwarf Roses can be forwarded through this medium with perfect safety, and for long distances much cheaper than by rail. We will forward twelve first-class plants, OUR OWN SELECTION of sorts, package free and postage paid, for 8/-.

## NEW ROSES OF 1903.

The descriptions are principally those given by the raisers. We have, however, seen flowers of several of these new roses, which we describe as near as we are able.

### HYBRID TEAS.

Dwfs.

- 5]- Alice Grahame (A. Dickson and Sons), colour ivory white tinted salmon, the flowers are very large of great substance and perfect shape, and promises to be fine for exhibition, the plant is a good grower and blooms freely and continuously.
- 3/6 **Domcapitula Dr. Layer** (P. Lambert), colour rich bright rose, shaded carmine, flowers large, full, and good shape, parentage (Caroline Testout x Princesse de Bassaraba).
- 5/- Elizabeth Kitto (W. Paul and Son), colour salmon pink, resembling Ame. Abel Chatenay in colour and shape, a free and continuous bloomer. Vigorous.
- 5/- Florence Pemberton (A. Dickson and Sons), colour creamy white with a flush of pink, the edges of the petals peach; flowers very large, full, and perfection in shape, a grand exhibition rose, and probably very desirable for the garden. Gold Medal N.R.S. 1902.
- 3/6 Frau Lilla Rautenstrauch (P. Lambert), colour apricot orange, suffused with yellow tiuted rose; flowers very large and full, with high pointed centre, a most promising rose, Vigorous.
- 5]- Gertrude (A. Dickson and Sons), a blush sport from that grand rose Countess of Caledon, V therefore no further description is necessary. Vigorous.
- 3/6 Gustave Grünerwald (P. Lumbert) colour bright earmine pink, with yellow centre, flowers large and full, cup shaped with high centre, buds are yellowish red, long and pointed. Very promising.
- 3/6 **Helene Welter** (*Welter*), colour very bright rose, flowers large, full, and perfect shape, carried on erect stems, and produced freely and continuously. A useful rose for any purpose. Vigorous.
- 3/6 Leon Robichon (Barbier), a white Careline Testout is the description given here by the raiser.
- 3/6 Mme. Edmee Metz (Soupert and Notting), colour salmon pink, not unlike Mrs. Edw. Mawley, flowers large very full and fine form; growth vigorous.
- 3/6 Mme. Paul Olivier (*Pernet-Ducher*), colour deep golden yellow, flushed with manye, distinct and very charming; the buds are long and graceful, and look very pretty on the deep bronze foliage. A vigorous grower.
- 3/6 Marguerite Guillot (Guillot), colour cream to pure white, flowers large, full, and sweet scented. A vigorous grower.
- 3/6 Monsr. Paul Lede (Pernet Ducher), colour bright deep rose, shaded yellow; flowers large, full, and variable in shape. We consider this an acquisition!
- 3/6 Princesse Marie Mertchersky (Schwartz), colour silvery china rose, flowers large, full, and fine form, the plant is of strong growth.
- 3/6 **Senateur Belle** (*Pernet Ducher*), colour salmon-flesh shaded earmine, with yellow centre, the flowers are large, full, and globular; the plant grows freely.

### CLIMBING ROSES.

- 5]- Blush Rambler (B. R. Cant and Sons), colour blush pink, about the shade of apple blossom.

  The flowers about the size of a florin, produced in large pyramidal clusters, similar to the trusses of Crimson Rambler, but not so dense. The plant is a rampant grower, suitable for arches, pergolas, or hedges. Awarded Gold Medal N.R.S., Glasgow 1903.
- 3/6 Climbing Mme. de Watteville (Faügue-Laurent), highly recemmended as a strong growing sport from that well-known charming rose Mme. de Watteville, the colour being identical with that variety.
- 3/6 Climbing Papa Gontier (Jules Gouchault, and Turbat), highly recommended as a strong growing sport from that well-known beautiful rose Papa Gontier.

### New Climbing Roses continued.

Dwfs.

- 5/- Field Marshal (W. Paul and Son) colour blood crimson shaded with velvety amaranth. This is a climbing variety of the crimson Chinese Rosa Semperflorens, very handsome and effective.
- 5/- Golden Queen N. (W. Paul and Son), colour rich golden yellow, a climbing Noisette rose resembling Reve d' Or, from which it is a seedling.
- 3/6 **Phillipine Lambert** (*P. Lambert*), colour, silvery pink, centre deep flesh, buds carmine pink, always opening well, the plant is free and erect.
- 3/6 **Schuee Kopf** (*P. Lambert*), pure white, small flowers produced in large clusters, pretty in all stages.

  The plant is free and erect in growth.

### POLYANTHA.

- 3/6 **Tea Rambler** (Paul and Son), colour deep coppery pink, changing to soft salmon pink, a striking combination of colours; the flowers are small, and are produced in large clusters on long trailing shoots, extremely pretty.
- The Farquhar Rose (Farquhar and Co.), colour, pink passing to white; this rose is the result of crossing Rosa Wiehuriana and Crimson Rambler, said to be a very valuable addition to the climbers.
- 3/6 Waltham Rambler (W. Paul and Son), this is a strong growing multiflora and produces extra large pyramidal trusses of rosy-pink single flowers, free and lasting, fine for pillars, arches, and bowers.

### TEAS.

- 3/6 **Angela Welter** (N. Welter), colour creamy white, with faint tint of yellow, flowers large, full, and good shape, in the way of K. A. Victoria. Growth vigorous. Very promising.
- 3/6 Herzogin Marie Von Coburg Gotha (Weller), white, with faint shade of yellow, edged with rose, flowers large and full, growth vigorous.
- 5/- Irish Brightness (A. Dickson and Son), flowers single, produced in trusses of from 5 to 10. The plant is free growing and branching habit. Colour vivid crimson, shading to pink at base of petals.
- 5/- Irish Pride (A. Dickson and Sons), flowers single, colour ecru, suffused old rose, the zone being old gold, not easy to describe; the growth is free, erect and branching, and the flowers are produced plentifully and continuously.
- 5/- Irish Star (A. Diekson and Sons), flowers large and single, born in large trusses continuously throughout summer and autumn, colour Rose du Barrii, with golden stamens, with a star like centre of lemon; the plant grows freely.
- 5/- Lady Roberts (F. Cant and Co.), see page 32, Stds. and half-stds. 5/- each.
- 3/6 Lady Waterlow (Nabonnand), colour pale salmon-rose, edged with carmine, large semi-double flowers, very elegant
- 3/6 Marie Bulow (N. Weller), colour pale rose, shaded deeper rose, flowers large, full, and freely produced on creet stems; vigorous growing.
- 3/6 Mrs. S. Treseder (Treseder), colour lemon yellow, a sport from Anna Olivier, possessing all the good qualities of that fine variety; growth vigorous.
- 5/- Queen of Sweden and Norway (Paul and Son), colour varying from salmon to white, not unlike Antoine Rivoire, large full imbricated flowers; promising
- 3/6 **Souvr. d'Helene** (Guillot), colour salmon white, shaded silvery pink, flowers large, full and bandsome, a good grower and quite first rate.

### CHINA ROSES.

- 5/- Arethusa (W. Paul and Son), colour clear deep yellow, tinted apricot, very free blooming and constant.
- 3/6 Comtesse du Caijla (Guillot), colour ranging from Nasturtium, red tinted with orange and carmine, to coppery-orange-yellow, shaded with earmine, flowers long and pointed produced freely and continuously.
- 5/- Rugosa Repens Alba (Paul and Son), the new weeping Rugosa Alba; the flowers are single, pure white and are produced freely and continuously, the weeping habit of this rose is most striking.

## OUR ROSES IN POTS

Are Magnificent Plants, all well established. The following varieties we can supply in 7in. and 8in. Pots from 21/- to 30/- per dozen; in 5in. Pots from 15/- to 18/- per dozen.

When ordering Pot Roses a few extra names should be added in case some sorts have all been sold.

### LORD PENZANCE'S

## Hybrid Sweet Briars.

These delightful single roses, raised by Lord Penzance, are admired by all who see them. Both foliage and flower are deliciously fragrant with Sweet Briar perfume; they are all strong growers, free bloomers, and perfectly hardy. These require little pruning, and make impenetrable hedges of great beauty; they also form charming objects when planted amongst shrubs or on lawns.

Dw	
1/-	Amy Robsartlovely deep rose; an abundant bloomer,
1/-	<b>Anne of Geierstein</b> crimson flowers, followed by an abundance of pretty clustered bunches of hips; graceful branching habit; one of the best.
1/-	Brenda
1/-	<b>Catherine Seyton</b> a very pleasing tint of soft rosy pink, the bright golden anthers being very prominent; very free flowering, perpetual.
1/-	<b>Edith Bellenden</b> pale rose, flowering profusely in clusters at the ends of the shoots which are long and pendulous.
1/-	Flora Mc'lvorpure white, flushed with rose; large flowers; graceful in growth and habit, one of the best.
1/-	Green Mantlebright rich pink, with a band of white encircling the anthers, which with 'their background of white have a very pretty effect, perpetual
1/-	Jeannie Deanevery large scarlet crimson; flowering freely in clusters; foliage of a deep healthy looking green.
1/-	Julia Manneringthe prettiest of all the pink varieties; very free flowering, perpetual.
1/-	Lady Penzancecopper, with a peculiar metallic lustre, the base of petals being a bright yellow; one of the best.
1/-	<b>Lord Penzance</b>
1/-	Lucy Ashtonpretty white blooms, with pink edges; wonderfully free flowering.
1/-	Lucy Bertrama fine deep crimson, the richest colour of all, centre pure white, showing the bright yellow authers to great advantage; a good autumnal,
1/-	Meg Merriliesgorgeous crimson; very free flowering; seeds abundantly; one of the best.
1/-	Minnalarge pure white, opening with a tint of palest blush; bushy habit; foliage like a Scotch Briar,
1/-	Rose Bradwardine,beautiful clear rose.

prettiest single roses; it makes a charming bush....,

lake; it makes a delightful bush ...., "

Abbreviations used:—Vig., denotes vigorous habit of growth; rob., robust habit of growth; mod., moderate habit of growth.

Our dwarf roses are budded so close to the roots of the stock on which they are worked that they are practically on their own roots, this being an immense advantage for fleet planting, which we strongly advocate.

As the season advances, customers are respectfully invited to supplement their orders with a few extra varieties, in case the stock of any of the sorts required should have been exhausted; if no supplementary sorts be named we consider we may be allowed to substitute equally good sorts of similar colour.

## Hybrid Perpetuals.

These are a very beautiful class of rose. They are perfectly hardy, and cannot be too highly recommended. To those who grow for exhibition they are indispensable. When grown for garden ornamentation hard or close pruning is not recommended. The best exhibition sorts are marked thus \*

Only those sorts which are priced in the column for standards and half-standards can be supplied as such. They are grand plants.

## Hybrid Teas.

These are the true perpetual flowering roses, alike in early summer until late autumn; they are continuously in bloom, and for general garden ornamentation there is nothing to equal them. Many of them make most beautiful standards as well as bushes. They are hardy, and unlike the H.P.'s, they are almost mildew proof. The best exhibition sorts are marked thus \*, and with but two or three exceptions these are all good strong growers. When grown for the adornment of the garden, severe pruning should be avoided.

Only those	sorts which are	priced in the	column for	standards an	d
half-standards	can be supplied	as such. They	are grand p	lants.	

Stds. or Half Stds Dwfs. NAME.	DESCRIPTION.	Habit of Growth.

## Tea and Noisette Section.

Of which we have a stock of **90,000** plants all on briar stocks, may well be called the "fair sex" roses, because the flowers are so delicately-beautiful and refined as to be unrivalled. They are ever-blooming from May to November, and last a very long time when cut. A slight protection in the form of brake or bracken, tucked into the heads of the plants, should be given in very severe weather; dwarf plants may be earthed up like celery; a few degrees of frost will not hurt them. They rarely take mildew, and are absolutely fungus-proof.

A high position and good porous soil suit these best, and undoubtedly the finest flowers are produced on HALF-STANDARDS, whether in the open ground or in pots. They like liberal treatment in manuring, and when planted in masses nothing can be more beautiful.

If large blooms are required for exhibition, teas must be closely pruned, leaving only about three eyes on each shoot, but if grown for garden ornamentation very little pruning is required, cutting away only the weakest wood. For this class we prefer good decomposed stable manure.

Only those sorts which are priced in the column for standards and halfstandards can be supplied as such. They are grand plants.

Stds. or Half Stds. Dwfs. NAME. DESCRIPTION.	Habit of Growth,
— 1/6*Adam (Adam, 1833), pale rose shaded salmon; large, full, and	•
PRESIDENT perfect shape; a free and continuous bloomer	vig.
1/6 Adeline V. Morel (N.), (Bernaix, 1891), pale canary yellow, edge of	
petals tinted apricot; a charming little button-hole	
flower, very late blooming	,,

## DWARF POLYANTHA ROSES.

These are of dwarf habit, producing compact clusters of charming miniature flowers throughout the summer and autumn. They are lovely bedders, and most useful for edgings or borders round beds of the stronger growing roses, and require very little pruning. They form charming specimens in pots for conservatory decorations. If allowed to grow unchecked, large bushes 2ft. high with clusters of these charming little flowers will be the result.

petals deep rose and salmon, free and continuous blooming,
SCOTCH BRIAR ROSES.
These we can supply in the following colours at 1/- each, extra strong plants: PINK, WHITE, LEMON, and YELLOW. The flowers are
small and semi-double, produced abundantly on shoots,
covered with small sharp spines.
to bloom and a good autumnal.

#### A ROSE BOWER

Composed of Ayrshire, H.T., and Tea Climbing Roses,

#### CLIMBING ROSES.

Under this heading we include all roses suitable for walls, arches, pergolas, bowers, &c., and describe as far as possible the position for which each variety is best suited.

The Ayrshire roses produce such a wealth of bloom during early summer, they are indispensable for arches and bowers, but as they bloom only once in the year it is always advisable to plant with them an autumn blooming rose to prolong the beauty of any arch or bower, for example, if *Dundee Rambler* and *Gruss-an-Teplitz* are planted together, the first-named will bloom in early June, and the last-named will continue in bloom until late autumn.

Climbing roses planted on lawns beside carriage drives, if treated in the following manner, will form pyramids of wonderful beauty, producing masses of blossoms from base to top. A hole 2ft. deep and 2ft. square will accommodate one early and one late blooming rose, insert three stakes 8ft. to 9ft. long in the ground 1½ft. from the plant, to form the three corners of a triangle, the upper ends must be brought together and securely tied with strong string. The long shoots of the Climbing roses must then be bent and trained round the three stakes, and after two years' growth the stakes will be entirely hidden by the foliage and blossoms. Try Crimson Rambler and Reve d'Or in this way as an experiment! There are many old gardens in which the bare trunks of old trees may be made objects of great beauty by planting Climbing Roses at the base of the trunk of the trees and training the roses round. We shall be pleased to give instructions for planting to any enquirers.

Climbing Roses continued.

ali other respects like the original, from which it is a sport.

Stds. or
Half Stds. Dwfs. NAME. DESCRIPTION.
1/6 Climbing Marie Finger, a vigorous sport from Marie Finger (see page 19).
— 1/6*Climbing Mrs. W. J. Grant (H. Γ.) (W. Paul and Son, 1899), a vigorous growing, free flowering sport from Mrs. W. J. Grant, a great
acquisition to the climbers
2/ 1/6 Climbing Niphetos (T.) (Keynes, Williams and Co., 1889), a vigorous growing,
to 3/- free flowering sport from Niphetos.
2/ 1/6 Climbing Perle des Jardins (T.) (Henderson, 1891), a vigorous free-flowering
sport from <i>Perle des Jardins</i> ; a grand yellow climber, with
deep bronzy foliage
— 1/6 Climbing Queen of Queens (H.P.) a vigorous sport from Oueen of Oneens.
1/6 Cloth of Gold (N.), (Coquereau, 1843), pure yellow; perfect shape, but
delicate, and a shy bloomer; must have a south or west
wall, and be sparingly pruned
— 1/6 Comtesse de Galard-Bearn (N.), (Bernaix, 1894), clear canary yellow, with deeper centre, tinted pink; flowers freely produced; quite
an acquisition to the climbers
— 1/6 Climbing Souvr. de la Malmaison (Bourbon) (Bennett, 1893), a strong climbing
sport from the old variety; very free and continuous
blooming; best in autumn
1/- Crimson Rambler (Poly.) (Turner, 1893), flowers are small and double, pro-
duced in large pyramid-shaped trusses, and are the
brightest crimson retaining their colour for more than a
week. Standards 2/ This does not thrive on a south
or west wall, but succeeds best on arches or pillars. Gold Medal, N.R.S.
1/6 Dawn (H.T.), (Panl and Son, 1898), colour rosy pink, shaded to silvery rose;
flowers large and semi-double, produced in clusters
— 1/- Dawson (Polyantha), semi-double blooms about two inches in diameter ; colour
rosy pink; this is a rampant climber, suitable for arches.
— 1/6 Dr. Rouges (T.) (Schwartz, 1894), red, shaded with coppery yellow, medium
size flowers, variable in shape and colour; an attractive and
distinct decorative rose of semi-climbing habit
shape; suitable for arches, pillars or any exposed position.
2/· ELECTRA (Poly.) (Veitch, 1902), canary yellow shaded, deeper yellow; flowers
about the size of a florin, produced in large pyramidal
trusses until late summer; strongly scented
2/- ENGLAND'S GLORY (H.T.), (Wood and Sons, 1902), colour flesh, with pink
centre, the blooms are large and full, but rather flat and
open. A very free and continuous bloomer
1/6 <b>Euphrosyne</b> (Polyantha), (P. Lambert, 1896), a vigorous grower and profuse
bloomer; colour bright pink, half-open buds, carmine. When fully open the yellow anthers give the flowers a
charming effect; suitable for arches pergolas, pillars &c.
1/6 E. Y. Hermanos (T.) (Bernaix 1895), colour apricot and carmine reflexed with
deep red; large full and perfect shape, a valuable
addition to the climbers
1/6 Fanny Stolwerck (T.), Nabonnand, 1897), yellow and salmon rose, shaded with
peach and copper, outer petals carmine; a good climber.
/9 Felicite Perpetue (Ayrshire) (Jacques, 1828), creamy white; resette shaped; a
rampant climber, suitable for arches, bowers, &c
red; almost single; must be grown on a wall or under
glass; a rampant climber

Climbing Roses continued.

Meyer, (Froebel, 1900) colour clear silvery rose; flowers very large, sometimes four inches across them; the plant is free flowering and very early .....very -/9 Delicata (Cooling and Sons, 1898), colour soft rose; flowers large and double, produced in clusters abundantly and continuously -/9 Fimbriata (Morlette, 1891), white fimbriated semi-double flowers, tinted with the palest blush rose; a strong grower; one of the -/9 Mme. Geo. Bruant (Bruant, 1887), pure white flowers, semi-double; produced abundantly; one of the best..... -/9 Rose Apples (Paul and Son, 1896), flowers semi-double, with large petals; colour pale carmine rose; flowering in immense clusters during summer and autumn ..... -/9 Rubra (Thunberg, 1802) ...deep rose, shaded violet; large single flowers ..... -/9 Souvr de Pierre Leperdrieux (Cochet-Cochet, 1896), flowers semi-double, and of bright veinous-red colour ..... BANKSIAN ROSES. These have not strong constitutions, and require to be grown on a south wall. The flowers are produced on the weaker shoots, very early, sometimes in April; they require very little pruning. Extra strong plants of these can be supplied at 2/6 each. Habit or NAME. DESCRIPTION. 1/6 White (Kerr, 1807) .......white; small and very double; violet scented; quite Growth.

## MOSS ROSES.

The exquisite buds and delightful fragrance of these roses commands many admirers and deservedly so, for what can better represent art in nature than a Moss Rose. We do not recommend severe pruning for this section.
Stds. or Habit of Growth.
—/9 Baron de Wassenaer, bright red flowers; produced in clusters ,,  1/6/9 Blanche Moreau, pure white; pointed bud; prettily mossed; the
best white
mossed; very fragrant
